Methods to measure core liquidity deposits

Before implementation of internal model < Standardized method>

(FSA's bank supervision guideline)

- Introduced the idea of core liquidity deposits in FY2007
- Balance: the smallest of the following
 1. Lowest balance for the past 5 years
 2. Current balance less maximum annual outflow observed in the past 5 years
 3. Current balance x 50%
- Maturity allocated evenly over 5 years (2.5 years on average)

Internal model

- RB and SR adopted in Apr.2010, KO in Oct.2010
- Rationally modeled depositors' behaviors to grasp how much can be regarded as core liquidity deposits
- Maturity allocated evenly over 10 years (5 years on average)
- Longer maturity applicable to core liquidity deposits (from 2.5 years to 5.0 years on average) enables the banks to take longer-term interest rate risk
