Efforts to Build Solid Foundation for Sustainable Growth

Direction of Capital Management

Reference Material

Introductory Comments: Today's Points

1

■ Implications of the new monetary policy

- Views it positively since the BOJ showed certain consideration for banks' earnings
- However, the strengthened forward guidance implies a risk of prolonged low interest rate environment

2

■ 1st half results: Robust bottom line, achieved the guidance

- Impacts of the NIRP almost in line with what we have expected
- Despite an increase in expenses in strategic areas, operating expenses were maintained almost flat from previous year
- Credit cost declined significantly due to absence of one-time factor of last year and continued improvement in the quality of loan portfolio
- Revised up the full year earnings target to JPY170 bn (+JPY10 bn, or +6.2% from the original earnings target)

3

■ Efforts to build solid foundation for sustainable growth

- Steadily implementing the "Omni-channel" strategy
- Formulate a new mid-term management plan which will start from next fiscal year
 - Need to 1) diversify income source and 2) enhance cost competitiveness even further, given a risk of prolonged low interest rate environment

4

■ Progress in capital policy

- Repurchase and cancel Class 6 Preferred Shares (totaling JPY 75 bn) on Dec. 8th.
- A planned step towards realizing a DPS increase (+2 yen YoY, 19 yen per annum) announced at the beginning of the year

Methods to measure core liquidity deposits

Before implementation of internal model < Standardized method >

(FSA's bank supervision guideline)

- Introduced the idea of core liquidity deposits in FY2007
- Balance: the smallest of the following
 1. Lowest balance for the past 5 years
 2. Current balance less maximum annual outflow observed in the past 5 years
 3. Current balance x 50%
- Maturity allocated evenly over 5 years (2.5 years on average)

Internal model

- RB and SR adopted in Apr.2010, KO in Oct.2010
- Rationally modeled depositors' behaviors to grasp how much can be regarded as core liquidity deposits
- Maturity allocated evenly over 10 years (5 years on average)
- Longer maturity applicable to core liquidity deposits (from 2.5 years to 5.0 years on average) enables the banks to take longer-term interest rate risk
